EDUCATION

BS Computer Science

University of Haripur

Sep 2022 – Jun 2026 | CGPA
3.26/4.00

FSc Computer Science

Sir Syed College, Wah Cantt

2019 – 2021

Matriculation – CS

Saint Paul High School, Wah Cantt

2017 – 2019

SOFT SKILLS

- Effective Team Collaboration
- Strong Communication & Presentation
- Fast Learner & Self-Driven
- Problem Solving & Analytical Thinking
- Adaptable in Dynamic Environments

PROFESSIONAL SUMMARY

Motivated Computer Science graduate with hands-on experience in AI-powered deep learning applications, full-stack web development, and conversational AI systems. Proficient in Python, React, Next.js, Flask, Node.js/Express, and Tailwind CSS, with a solid foundation in data structures and algorithms. Completed frontend and JavaScript internships (Next.js, Zustand, Zod, REST APIs). Delivered a real-world Plant Disease Detection System using CNN trained on 90K+ images, and an AI-powered hospital appointment chatbot with hybrid online/offline LLM architecture. Experienced in building AI tools via vibe coding, including voice assistants, OCR readers, and automation bots. Also skilled in diagnosing and resolving Windows OS, driver, and hardware issues on laptops and desktops.

INTERNSHIP EXPERIENCE

Frontend Developer Intern — [Techsila](#) | 3 Months

Next.js | React | Zustand | Zod | REST APIs | Tailwind CSS

- Built responsive frontends with React and Next.js; managed state with Zustand and validated data with Zod
- Integrated and handled REST APIs, including data fetching, loading and error states

JavaScript Intern — [Linesquare Technology](#) | 1 Month (after 6th semester)

JavaScript (ES6+)

- Completed a 1-month JavaScript internship after the 6th semester, working on real-world JavaScript tasks

FINAL YEAR PROJECT

Plant Disease Detection System — [2026](#)

Deep Learning | CNN | Flask | React | Tailwind CSS | Kaggle

- Engineered a CNN-based deep learning model trained on 90,000+ labeled leaf images from Kaggle for accurate plant disease identification
- Built a full-stack application with Flask REST backend and React + Tailwind CSS frontend
- Integrated actionable diagnosis recommendations — prevention and treatment advice — alongside disease identification
- Achieved high classification accuracy across multiple crop disease categories

FEATURED PROJECT — AI HOSPITAL CHATBOT

Al-Shifa General Hospital Appointment Chatbot — [2026](#)

React (Vite) | Express.js / Node.js | SQLite | Gemini LLM | Ollama (Offline Fallback) | RAG

- Designed and built a full-stack hospital appointment chatbot with a React/Vite frontend and an Express/Node.js + SQLite backend
- Implemented a hybrid online/offline LLM pipeline — Google Gemini as the primary cloud model with a local Ollama model as an automatic offline fallback, ensuring uninterrupted booking assistance during network or API outages
- Built a Retrieval-Augmented Generation (RAG) layer for hospital FAQ handling, grounding chatbot answers in verified hospital information
- Engineered robust conversational state management to persist booking details across multi-turn conversations, including cancel and reschedule

TECHNICAL SKILLS

Python • JavaScript (ES6+)
C++ • React.js • Flask
Next.js (Advanced) • Zod
Zustand • API Handling
Node.js/Express (Intermediate)
HTML5/CSS3 • Tailwind CSS
TensorFlow/Keras • CNN
Deep Learning • LLM APIs
Gemini • Ollama • RAG
SQLite • REST APIs
Web Scraping • Vibe Coding
Image Recognition
VS Code • PyCharm • Kaggle
MS Office

CERTIFICATIONS

National IT Skill Test

78th percentile nationally — 2026

Udemy – Advanced JS (ES6+)

ES6+, DOM, async JS, OOP, APIs — 2025

LANGUAGES

English — Professional

Urdu — Native

TECH SUPPORT SKILLS

- Windows OS install, repair & troubleshooting (7/10/11)
- Windows & MS Office activation (KMS, digital license)
- Driver installation & conflict resolution
- System optimization — startup, disk cleanup, registry
- Network, Wi-Fi & internet connectivity troubleshooting
- Antivirus setup, malware removal & system security

intent detection

- Developed custom natural-language time parsing for both English and Urdu/Roman-Urdu date and time expressions

AI & VIBE CODING PROJECTS

Text to Motion

- Converts text prompts into animated motion sequences using an LLM API, generating visual output from natural language descriptions — *LLM API, Python, Vibe Coding*

PDF Reader & Photo OCR

- Extracts text from non-copyable PDFs and images using an LLM vision API; handles scanned documents where text cannot be selected — *LLM Vision API, OCR, Python, Vibe Coding*

Bond Website Checker

- Automatically checks prize bond results on the official website across the last 5 years and displays draw history — *Web Scraping, Python, Vibe Coding*

Jarvis Voice Assistant

- Personal AI voice assistant inspired by Iron Man's Jarvis; responds to voice commands, answers queries, and performs hands-free tasks — *Speech Recognition, LLM API, Python, Vibe Coding*

SEMESTER PROJECTS

LPC – E-Commerce Website — [Web Engineering](#)

- Designed and built a multi-page static e-commerce platform showcasing PCs, laptops, and components with clean category navigation

Rock-Paper-Scissors – Memory-Based Flex Agent — [Artificial Intelligence](#)

- Developed a Python game featuring an AI flex agent that predicts player moves using historical input pattern analysis

Number Guessing Game – Linked List — [Data Structures & Algorithms](#)

- Implemented a C++ number guessing game using linked lists with intelligent high/low prediction guidance

ICT Thesis Report — [Information & Communication Technology](#)

- Produced a complete academic research report with synopsis, structured documentation, table of contents, and references
